

1 1. (Twice Amended) An apparatus for providing a pictoral representation,
2 comprising at least one static presentation region for providing at least a first, unchanging
3 rendering and at least one dynamic presentation region adjacent said at least one static
4 presentation region, said dynamic presentation region providing at least a first series of
5 changing renderings; said static presentation region being cast in a first, non-electronic,
6 medium and having a plurality of openings formed therein, said openings accommodating
7 the dynamic presentation medium which is cast in a second medium.

1 19. (Twice Amended) A method for generating a pictoral representation,
2 comprising the steps of: providing a first region having a static presentation, and
3 providing at least one adjacent region displaying a dynamic presentation; said static
4 presentation region being cast in a first, non-electronic, medium and having a plurality of
5 openings formed therein, said openings accommodating the dynamic presentation medium
6 which is cast in a second medium.

8 Clean, unmarked versions of amended claims 1 and 19 follow:
